

A elastomeric cover (300) is disclosed having a perimeter grip (321) for fitting
on a raised lens of a mobile station. The elastomeric cover may have at least one
strap (351), which may encircle parts of the mobile station. Button key-tops may be
covered by the elastomeric cover, wherein the elastomeric cover may flex sufficiently
so that the key-top may actuate a circuit. The elastomeric cover may block fluid
ingress into the mobile station. The elastomeric cover may be removable without the
use of tools.
